

**WORKING AT HEIGHTS:
MET MAST INSTALLATION**

Our team has successfully completed the installation of a meteorological (MET) mast for one of our renewable energy clients in the south of Vietnam. Measuring up to 100 meters, this height work does require the strictest quality control procedures, installation documentation and adherence to international (OHSAS 18001) and Vietnamese (TCVN 8207-1:2009) safety standards. This ensures the safety of our workers and the best quality outcome for our client. ■

**FACILITY OPERATION AND MAINTENANCE:
THE FULL LIFECYCLE**

The execution of an EPCC project always requires an excellent collaboration between role-players, as well as the utmost efficiency and quality of service. We successfully completed such a project in a factory for one of our clients. This service was such a success that our team is now also in charge of producing and executing a daily maintenance schedule, which will ensure all of the equipment remains in an excellent operational condition. ■

**VERSATILE & EFFICIENT:
MULTIDIRECTIONAL SCAFFOLDING**

This month, VIVABLAST was commissioned to erect a multidirectional scaffold system for the renovation of a historical monument of Ho Chi Minh City. This scaffolding is faster to erect and also does not take much manpower. It is very popular for many forms of access and support structures and is also one of the safer types of scaffold systems. Our certified team is able to erect and ensure the erection as per standards and schedule given. ■

**GENTLE CLEANING POWER:
GLASS BEAD BLASTING**

VIVABLAST is one of the few providers of glass bead blasting in the industry, which does not cause so much erosion on the surface of a coater while it is being cleaned. We were asked to provide the manpower, also material and specialised equipment to successfully do the cleaning of a full set of coaters for one of our valued manufacturing client. We ensured these were resized and fully cleaned to provide continued efficiency. ■
