

POWER GENERATION

COMPLETE SAFETY ADHERENCE - TOOL BOX MEETING

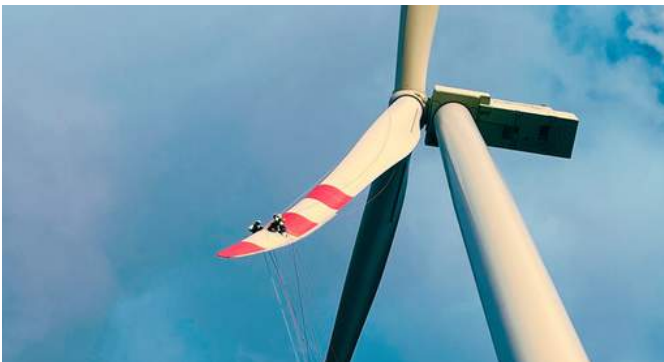

Within the demanding environment of a thermal power plant, technicians navigate a multifaceted landscape of potential threats, including electrical hazards, extreme conditions, and working at significant heights. Given the potential for extremely severe consequences, workplace safety is our top priority.

As our commitment, we strictly applied the settled working process to ensure top-notch safety for our technicians. Prior to each work shift, technicians and HSE professionals engaged in a concise tool box meeting. This serves as a platform to discuss tasks of the day, identify potential hazards, and ensure that all team members adhere to comprehensive safety protocols. This proactive approach effectively safeguards the well-being of all technicians, guaranteeing they are equipped with the necessary PPE, thoroughly versed in power plant safety regulations, and prepared to respond appropriately in emergency situations. ■

RENEWABLE ENERGY

WIND BLADE REPAIR BY ROPE ACCESS TECHNICIANS

In June, VIVABLAST's team of highly skilled technicians employed rope access techniques to perform blade repairs in central Vietnam. To guarantee exceptional outcomes for our clients, we comprehensively executed the entire work process, from the toolbox meeting to accessing the damages and assessing its severity. Based on this thorough assessment, a comprehensive repair plan was devised and implemented.

These specialized repairing methods allowed Vivablast technicians to access and repair damages on wind turbine blades while safely suspended from ropes. Using rope access, our team ensured a cost-effective and safe solution for wind blade repair, which helped optimize performance and longevity. The project was executed in full compliance with strict safety protocols and within the allocated timeline, enabling the prompt restoration of the wind turbine to operational status and thereby enhancing overall factory productivity. ■

RENEWABLE ENERGY

360° BLADE ACCESS PLATFORM

Recent times, blade access platforms have gained confidence and trust among the OEMs and Plant owners to execute the critical blade repair works which are a challenge for traditional access method. Blade access platforms inherently provide reliability and versatility for vital inspection, repair, and maintenance tasks, Vivablast's solution stands as the perfect solution for our valued client.

Thanks to our highly skilled and certificated operators, along with our safe and efficient heavy machinery delivery system, we ensured top-tier quality for our client's wind turbine maintenance activities. Our offering, the SQY Flex, is a fully functional 360-degree Blade Access Platform designed for rapid and easy mobilization to the site, with a reach where most of the Turbines can be handled to its tip without any issues. Tailored to our client's specific needs, this solution provided a more cost-effective approach in comparison to traditional approaches, as well as enhanced safety and stability for technicians working on-site. ■

RENEWABLE ENERGY

BLASTING AND PAINTING STEEL FRAMES AND FEET

BEFORE

AFTER

This month, VIVABLAST performed blasting and painting steel frames and feet for a major renewable energy company. We thoroughly prepared the surface by blasting, and then skillfully applied two layers of coating system to steel frames and feet. Continuously exposed to the harsh effects of weather, these components rely on protective coating layers to shield them from corrossions, paint flakings, and other environmental damages.

Under VIVABLAST's professional supervision, the entire working process achieved cutting-edge quality and reliable safety for the client. Our QA/QC specialists carefully documented each stage and issued completion certificates, ensuring a transparent and consistently high standard throughout the project. The success of this project would not have been possible without the invaluable collaboration and support of our clients. ■
